EDUCATION

- Bachelor of Science – Environmental Studies, 2007, Florida State University, Tallahassee, Florida

WORK EXPERIENCE

- Ø **May 2014 to Present. Environmental Scientist** – Trihydro Corporation - Jacksonville, Florida.
 - Design and implementation of site assessment, remediation, and monitoring programs; remediation system construction and installation oversight, and performing remedial operation and maintenance (O&M) activities.
 - Implement and oversee soil and groundwater remediation plans related to Phase II ESA for retail gas stations.
 - Conducted Phase I & II ESAs of automotive dealerships.
 - Experienced in construction of petroleum remediation system installation.
 - Experience in groundwater and soil sampling on RCRA and CERCLA facilities.
 - Extensive Phase I and Phase II ESA report writing experience.
- Ø **June 2010 to May 2014. Environmental Scientist** - URS Corporation - Jacksonville, Florida.
 - Conduct Phase I Environmental Site Assessments (ESA) of commercial and industrial facilities, such as golf courses, auto dealerships, auto repair facilities, office buildings, retail facilities, and warehouses in order to determine their environmental condition and related environmental liabilities.
 - Implement and oversee soil and groundwater remediation plans related to Phase II ESA for such facilities as petroleum terminals, automotive dealerships, service centers, rental car facilities, gas production facilities, and transportation companies.
 - Conducted Phase II ESAs of service pumping stations owned by gas production and transportation companies.
 - Experienced in construction of petroleum remediation system installation.
 - Conduct inspections on aboveground and underground storage tanks at vehicle distribution centers.
 - Develop Spill Prevention Control, and Countermeasure plans for rental car facilities, dealerships, product distribution centers.
 - Experience in groundwater and soil sampling on RCRA and CERCLA facilities.
 - Extensive Phase I and Phase II ESA report writing experience.
 - Experience working in multidisciplinary teams which included geologists, hydrologists, environmental scientists, engineers, soil scientists, real estate specialist and cost estimators.
- Ø **October 2007 to June 2010. Environmental Consultant** - Coastal Science Associates, Inc. - Jacksonville, Florida.
 - Prepared and filed Permit Applications and associated reports, plans, drawings, and data for the St. Johns River Water Management.
 - Conducted wetland delineations on numerous tracts of undeveloped land throughout Florida and the southeastern US. The tracts of land ranged in size from single family parcels up to several thousand acres.
 - Wetland delineations and determinations consisted of the review of infrared aerial photographs, topographic maps, and national wetland inventory (NWI) maps. Arcview – GIS was utilized to

reproduce and view some of the previously-mentioned data-sources. Field work consisted of identification of soils, vegetation, and hydrology to determine if portions of a site met Federal and/or State criteria to be identified as jurisdictional wetlands.

- Compiled data and site observations to map and delineate wetland boundaries in the field, and to reproduce images reflecting site conditions.
- Submitted reports to the Army Corps of Engineers (federal regulating agency) and several of Florida's Water Management Districts. Field-reviewed and verified wetland lines with representatives from agency staff members in Florida, Georgia, and South Carolina, to acquire approved wetland boundaries from these agencies.
- Assisted in mitigating impacted wetlands throughout Florida and the southeast. Responsible for planting, monitoring, and maintaining desirable wetland vegetation in mitigation areas. Maintenance tasks required removing invasive/exotic vegetative species. Monitoring activities included establishment of transects through a mitigation area, measuring the heights and basal diameters of planted species within each transect, and recording overall recruitment of herbaceous or other vegetative species. Species identification of recruited species was necessary to determine the overall "health" of wetland systems.
- Monitored wetland mitigation areas to determine if they were achieving the desired outcome intended of establishing a functional wetland system.
- Conducted endangered and threatened species surveys throughout Florida and the southeastern US and produced reports identifying species of concern. Obtained lists of endangered and threatened species provided by federal, state, and county resources for review prior to conducting field surveys.

TRAINING

- OSHA 40 Hour Hazardous Waste Operations and Emergency Response Training
- OSHA 8 Hour Supervisor Training
- SMITH Safety Driver Training
- Ocean Rescue Lifeguard (2002-2007)
- PADI Advanced Diver
- Boater Safety Training
- CPR/First Aid/AED Certification
- TWIC Card Holder
- Georgia Port Authority Authorized
- Proficient in Auto-CAD
- Proficient in GIS Arc View

SOCIAL

- Vice President Jacksonville Rugby Football Club 2014-2015
- Captain Jacksonville Rugby Football Club 2011-2014
- Florida State University Track and Field 2002-2007
