WORK EXPERIENCE

Fitter

United Steel Fabricators - Trinity, TX - July 2013 to Present

I started at this company running the hydraulic punch. When I would get caught up on my work with the punch I would go and help the fitters. Eventually, I gained enough experience, and was moved up to fitting. I also learned how run a track torch splitting beams and cutting plate up to 2 inches thick. Some of the accomplishments I made were being the fastest man on the hydraulic punch. I once did 600 holes in an hour. I could find the center punch without having to look. Something that the foreman had me teach to other workers. I improved the time it took to stack the beams and columns once they were finished .Using one hook in the center of the beam to lift it. Rather than circling the chain around each one. This sped up the process and allowed more beams to be stacked together before I moved them to the fitters station. Also, I eventually got good enough with the track torch to wear I could set it without leaving any slag behind. Inevitably, this led to me doing the majority of the burning at the shop. Some skills I used for this position were fitting, tack welding, hydraulic punch, forklift, crane operator, track torch, blow torch.

Fire Watch, Mechanic Helper, Environmental, Clean up,

Troy Construction - Houston, TX - March 2011 to February 2012

Gas and oil pipeline construction company. Started off as a fire watch crew member. Duties included operation and maintenance of water truck. Prevent welding sparks from causing grass or forest fires. After fire risk level was reduced I transferred to Mechanic Helper. The job description for this position includes knowledge of tools, measurements, and parts of construction equipment. Aided lead mechanic in the maintenance of various machines and construction equipment throughout the pipeline right of way. I again transferred to clean up crew which duty was to make sure that the completed parts of the job site were left as good or better than when construction began.

Call Center Supervisor

Profinity - Boca Raton, FL - October 2009 to February 2011

Inbound call center supervisor and customer retention specialist. I worked from home using VOIP through my PC. Duties include maintaining a customer retention rate of at least 30%. Managing customer payments and account history. As well as deactivate, extend, or issue refunds for various memberships and services. I obtained valuable experience in determining validity of customers disputes and complaints. As well as valuable sales knowledge and important judgement skills in determining whatever is necessary to provide sufficient customer service.

Sales Representative

AJR Metalworks - Dallas, TX - October 2008 to September 2009

During my time with this AJR I gained valuable skills in customer service and business management. My duties included answering phones on sales calls, calculating price for customer quotes, writing up sales orders, and reading mill test reports.

Carpenter, General Construction

Kelsea Construction - Plano, TX - September 2004 to October 2006

Gained valuable experience in measurements, construction equipment, and tools. Kelsea Construction was my fathers company. We worked on both commercial and residential properties.

Shipping and Receiving Clerk

American Alloy Steel - Houston, TX - January 2004 to September 2004

This was the first "real" job I ever had. Started off as a grinder. Where I learned the meaning of labor intensive. However, more importantly this was also the job where I learned to operate a fork lift and a magnetic bridge crane.

EDUCATION

High School Diploma/One Semester of College in Associates Business Management

Alpha Academy/ University of Phoenix - Texas

2003 to 2006

SKILLS

Construction, forklift, bridge crane operator, carpenter, customer service, sales, audio & video installer, fitter, track torch, blow torch, tack welding, 50WPM, MS Word, MS Excel.
