Summary

I started in Houston working as a saw operator manufacturing drilling tools.. I worked my way up until I was operating the oldest nc lathe and doing all the rework and odd jobs. From there I transferred to Oklahoma and learned to run manual machines. I became group leader and gained experience as a leader in charge of production and scheduling. I have worked my way up to the top of my class everywhere I have been since then.

Work Experience

June 1999

Southern Apparatus Services

April 2006 to Current

Machinist

West Monroe, La.

This is a large motor repair plant. Our customers are mainly Energy power plants and paper mills. We repair and rebuild from 2 hp motors to 5000 hp vertical and horizontal motors. My job as group leader consists of inspecting dismantled motors, determining the mechanical repairs needed and how to accomplish them, and doing the actual repairs. I nickel plate shaft fits, metal spray some fits, bush housings, and mfg new shafts.

Windham Mfg.

June 1999 to March 2005

Machinist

Dallas, Texas

This was a true all around shop. I was hired to operate a new 65" Leblond cnc vertical lathe. That machine was very busy as I worked my way into the shop foreman's position. I learned the auto-cad system and how to write programs by hand.

General Electric

February 1986 to June 1999

Machinist

Dallas, Texas

I become a turbine mechanic and on-site machinist here. I've traveled all over the country and world performing on-site machining and rebuilding steam turbines and generators for power plants. I've done on-site grinding, turning, and milling, as well as the same at home in the shop. I've been loaned out to many other service shops and always had a good report and been asked to return.

James Machine Works

January 1985 to February 1986

Machinist

Monroe, La.

Here I gained valuable job shop experience. The motto was if it can fit in the door, we can fix it. I learned many other skills off of the machines, such as layout work, drilling and tapping, and welding.

Hughes Tool

March 1982 to December 1985

Machinist

Clinton, Ok.

I learned to operate manual machines here, as well as gaining valuable skills in scheduling and production. We became the only service shop for Hughes Tool that consistently earned a profit.

Encore drilling tools

December 1980 to March 1982

Saw Operator to Machinist

Houston, Texas

I started as a saw operator and worked my way to running all of the nc machines. When I left, I was operating the oldest nc lathe, which ran all the rework and odd jobs. I was doing 4 or 5 setups a day, while most other operators did about one a month.

Education

Lathrop High School 1979

High School Diploma

Fairbanks, Alaska, United States

G.E. also sent me to balance school and silver soldering school in New York.
