

JONATHAN POPOVITCH

1115 North Howard Street , Philadelphia, PA 19123

Cell: 609-577-4136

jonathan.popovitch@gmail.com

SUMMARY

Motivated chemist inspired to invent innovative products and streamline processes. Adept at laboratory management and extensively trained in safety, equipment maintenance, synthesis, pre-clinical studies, and clinical studies.

HIGHLIGHTS

- | | |
|--|--|
| ▪ Trained in organic and inorganic chemistry | ▪ Texture analyzer |
| ▪ GLP/GMP environment | ▪ Compound optimization |
| ▪ HPLC Purification | ▪ GE FX-fn Radiosynthesizer operator |
| ▪ TLC analysis and Purification | ▪ ORA Neptis Radiosynthesizer operator |
| ▪ NMR analysis | ▪ Pilot Lab production and scale up experience |
| ▪ Knowledgeable in Infrared classification | ▪ Certified Radiation Safety Officer |
| ▪ Aseptic manipulation of injectable pharmaceuticals | ▪ DOT & IATA Class 7 HAZMAT/ Radioactive material shipment certified |
-

ACCOMPLISHMENTS

Successfully synthesized eIND clinical materials, that previously have never been injected into human patients. Requested additional responsibilities as the radiation safety officer to better serve the company's needs. Acting as safety leader since February 2012, for research and production labs.

EXPERIENCE

AVID RADIOPHARMACEUTICALS A WHOLLY OWNED SUBSIDIARY OF ELI LILLY & COMPANY

Philadelphia, PA

Radiopharmaceutical Development Chemist & Radiation Safety Officer

09/2011 to Current

- Manufacture of clinical radiopharmaceuticals for injection delivery systems
- Support exploratory investigational new drug (eIND) and traditional investigational new drug (IND) studies
- Synthesize radioactive ¹⁸F compounds using different radiosynthesizers, and manual synthesis
- Author pertinent manufacturing SOP's as well as radiation safety SOP's
- Ensure data quality and accuracy of laboratory notebook entries, reports, SOP's and batch records in compliance with cGMPs and SOP's
- Preparation and analysis of pre-clinical radioactive ¹²⁵I compounds through manual synthesis
- Certified Radiation Safety Officer who oversees radiation safety aspects of everyday operations and manage associated documents and archives
- Perform manual aseptic compound sampling in Class 100 sterile cleanroom
- DOT & IATA certified for shipment of Class 7 radioactive material
- Utilization of Visual management tools to clearly display critical safety, production, and laboratory operations

FMC CORPORATION

Ewing Township, NJ

Development Scientist

06/2010 to 09/2011

- Mentored and trained personnel in patented process for pilot and manufacturing duties
- Controlled and maintained an R&D encapsulation process for carrageenan (non-animal gelatin substitute) formulations
- Evaluated possible processes to enter the pharmaceutical market by making the process GMP and GLP approved
- Determined possible process and encapsulation parameters, mixing temperature, pressure, shear, time, encapsulation speed, injection time, delay time, etc.
- Monitored full plant operations of extraction process of carrageenan from raw material.
- Verified all specifications for equipment and raw products met desired customers' requirements
- Analyzed product properties, disintegration, hardness/burst tests, pH, elasticity, color, gradient profiles, viscosity, particle size, etc.
- Designed start-up procedures for manufacturing of the scaled up encapsulation process for facilities in the US and overseas

DREXEL UNIVERSITY

Philadelphia, PA

Inorganic Synthetic Chemist

01/2009 to 01/2011

- Independent Project Management
- Responsible for developing numerous synthesis experiments in their entirety including, creation of unique organic ligands and metal complexes utilizing various metal to ligand combination reactions
- Electrochemical Analysis on newly formed compounds
- Preparing scientific journal articles
- Lead author on a new rhodium complex research paper published in the Journal of Chemical Crystallography
- Interpreted X-Ray crystallographic structures

AMICUS THERAPEUTICS

Cranbury, NJ

Organic Synthetic Chemist (CO-OP)

03/2008 to 09/2008

- Assisted in pre-clinical Parkinson's chemical research
- Developed full synthetic route to a desired target compound
- Carried out numerous organic reactions such as: Grignard additions, Suzuki coupling, and demethylating using boron tribromide
- Purified compounds using different methods: Flash columns, Gradient columns, and Reverse phase columns
- Performed Thin Layer Chromatography research analysis
- Accomplished Analytical Chemistry experiments using: NMR, High Pressure Liquid Chromatography, Mass Spec
- Presented weekly updates

JOHNSON MATTHEY

West Deptford, NJ

Refining and Development Chemist (CO-OP)

04/2007 to 09/2007

- Lead independent projects
- Developed procedures and experiments to be implemented on larger scale production process.
- Managed multiple projects
- Completed full reports on projects
- Implemented scale up chemical procedures and processes for pilot plant operations
- Created products according to customer specifications
- Conducted analytical experiments

EDUCATION

BACHELOR OF SCIENCE: CHEMISTRY

2010

Drexel University, Philadelphia, PA

American Chemical Society Vice President - Drexel Chapter

PUBLICATIONS

Popovitch J, Addison A, Butcher R, Prushan M (2011). The 1,8-bis(2'-pyridyl)-3,6-dithiaoctane complex of rhodium(III). Journal of Chemical Crystallography.
