**Highlights of
Experience**

- Field research assistant
- Laboratory research assistant
- Outdoor hiking, packing and labor skills
- Leadership and public speaking skills

Education Bachelors of Science in Earth Sciences: Geology
Oregon State University
Winter 2015

**Work
Experience**

B, Johnson Turf & Irrigation- Crew Member. March 2015- Present. (40+ hours per week):
Maintenance of landscapes ranging from residential to commercial properties throughout multiple cities. Received my own individual route and truck after only a month and a half. Usage of a variety of tools and machinery to complete the jobs, primarily use of mowers, weed eaters, power shears and hand shears.

Clackamas County Parks - Ranger. May-September 2011, 2012, and 2013 seasons (40 hours per week):
Maintained order in the park by enforcing rules. Performed general maintenance duties and landscape management. Developed and maintained environmentally conscience hiking trails utilizing a variety of tools including: shovel, loppers, pull saw, tractor, and chainsaw. Coordinated with and managed fellow rangers. Ran ticket booth and information center for public and assisted park patrons. All duties carried out in accordance with established safety standards and proper safety gear.

Wong's King Restaurant – Busser, Host and Waiter. August 2010 – May 2011, (30 hours/week):
In accordance to all health and safety standards provided customers from entry to exit with food service. Began with bussing and hosting and progressed to a server. Served alcohol following all OLCC standards.

**Relevant
Projects**

- Research field assistant helping with the collection of modern stream water and Holocene tuff samples in Alaska. Next, comparing oxygen isotope ratios of the samples for analysis on the uplift of the Alaska Range and the role it played in the onset of glaciation. (August 2014)

- Laboratory assistant processing Antarctic granites into quartz. This included using a rock saw, crusher, pulverizer, magnetic separator and chemical bath with HCl and HF. The quartz is sent to a mass spectrometer for radiogenic age dating to determine if a slip of the Ross Ice Sector was the cause of 30m sea level rise approximately 14ka. (November 2013- December 2014)
